EXPERIMENT 3

Read an image and show its outline using the Canny function.

Aim

Read an image and show its outline using the Canny function.

Algorithm

• Import OpenCV and read the image.

• Convert the image to grayscale.

• Apply Canny edge detection with threshold values.

• Detect the outlines in the image.

• Save the edge image.

Code

```
import cv2

img = cv2.imread("images/input.jpg")
if img is None:
    raise FileNotFoundError("images/input.jpg not found")
gray = cv2.cvtColor(img, cv2.COLOR_BGR2GRAY)
edges = cv2.Canny(gray, 100, 200)
cv2.imwrite("output_images/experiment03_canny_edges.png", edges)
print("Saved output_images/experiment03_canny_edges.png")
```
