# EXPERIMENT 9

## Resize images to larger and smaller sizes using image scaling techniques.

### Aim

Resize images to larger and smaller sizes using image scaling techniques.

### Algorithm

• Import OpenCV and read the image.

• Check the image was loaded.

• Resize the image to a larger scale.

• Resize the image to a smaller scale.

• Save both resized images.

### Code

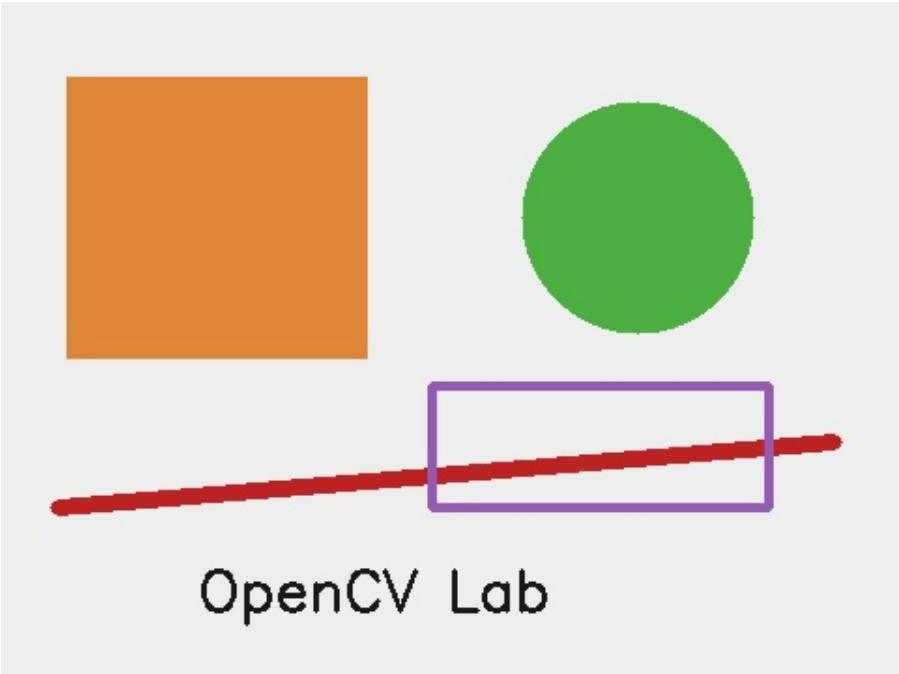

```
import cv2

img = cv2.imread("images/input.jpg")
if img is None:
    raise FileNotFoundError("images/input.jpg not found")
bigger = cv2.resize(img, None, fx=1.5, fy=1.5, interpolation=cv2.INTER_CUBIC)
smaller = cv2.resize(img, None, fx=0.5, fy=0.5, interpolation=cv2.INTER_AREA)
cv2.imwrite("output_images/experiment09_bigger.png", bigger)
cv2.imwrite("output_images/experiment09_smaller.png", smaller)
print("Saved larger and smaller images")
```
