EXPERIMENT 10

Rotate the given image 90 degrees clockwise.

Aim

Rotate the given image 90 degrees clockwise.

Algorithm

• Import OpenCV and load the image.

• Check that the image exists.

• Apply a 90-degree clockwise rotation.

• Save the rotated image.

• Review the saved result.

Code

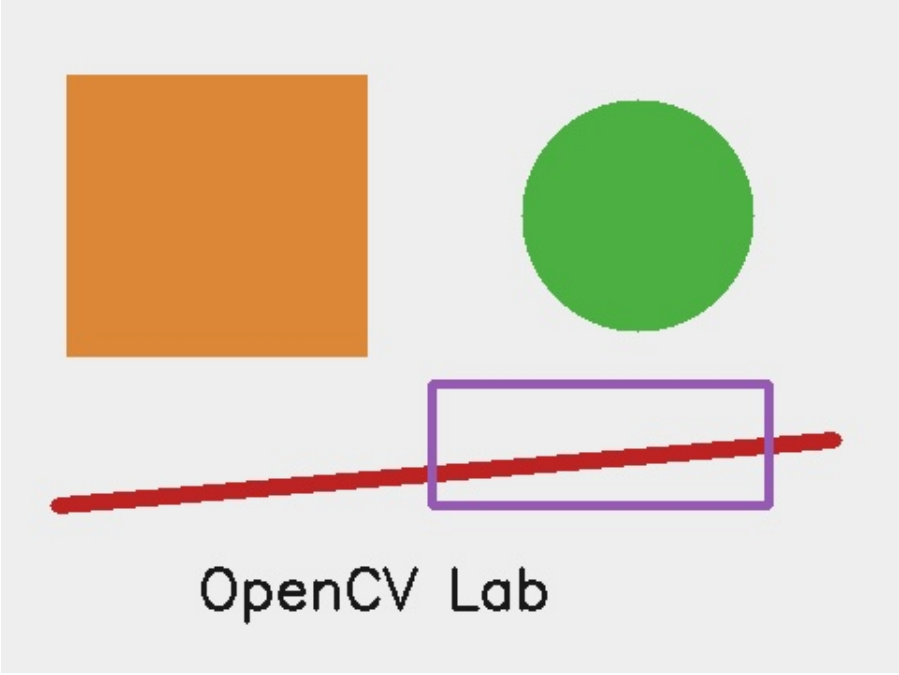

```
import cv2

img = cv2.imread("images/input.jpg")
if img is None:
    raise FileNotFoundError("images/input.jpg not found")
result = cv2.rotate(img, cv2.ROTATE_90_CLOCKWISE)
cv2.imwrite("output_images/experiment10_rotate_90.png", result)
print("Saved output_images/experiment10_rotate_90.png")
```
