EXPERIMENT 12

Rotate the given image 270 degrees clockwise.

Aim

Rotate the given image 270 degrees clockwise.

Algorithm

• Import OpenCV and read the image.

• Check the image was loaded.

• Rotate the image 270 degrees clockwise.

• Save the rotated image.

• Review the result.

Code

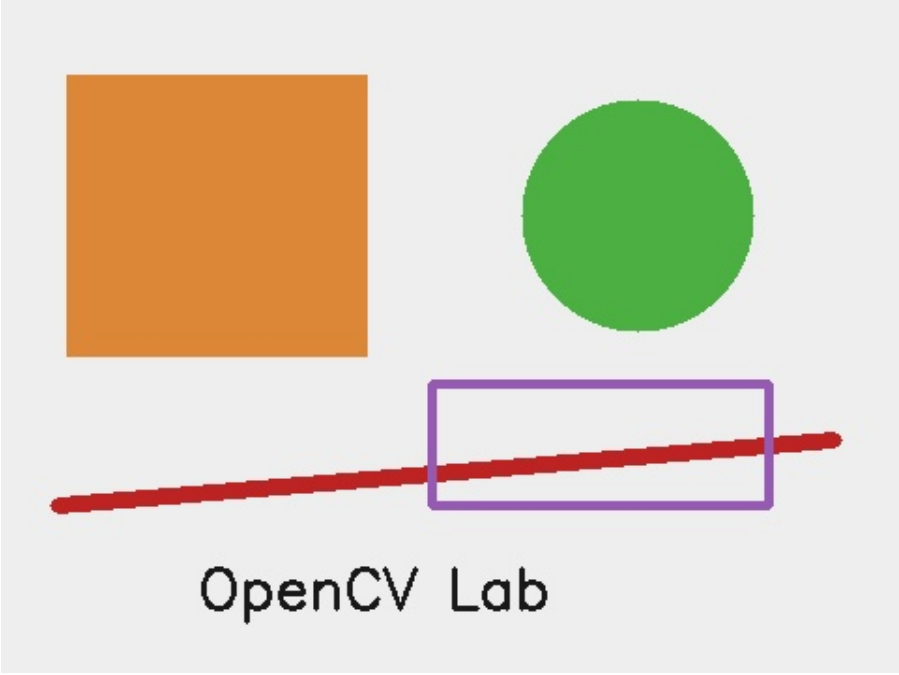

```
import cv2

img = cv2.imread("images/input.jpg")
if img is None:
    raise FileNotFoundError("images/input.jpg not found")
result = cv2.rotate(img, cv2.ROTATE_90_COUNTERCLOCKWISE)
cv2.imwrite("output_images/experiment12_rotate_270.png", result)
print("Saved output_images/experiment12_rotate_270.png")
```
